

CoreDestroyer Technology

The CoreDestroyer Technology terminates all the data in the drive, even the firmware and the management table. The drive would be unable to perform its functions.

CoreDestroyer is the ultimate disk-wiping feature. When executing this command, everything in the disk drive is destroyed, not only the data, but even the management table and firmware. The SSD will not be workable since the user, free, and system blocks are all emptied out, which leaves them lifeless. To bring the SSD back to live, firmware reloading is necessary.

CoreDestroyer Technology

★CoreDestroyer is an advanced security feature for user to destroy all data on the device without any possible retrieval methods in some reasons.
