

GeoVision at Audi of Manhattan

GeoVision brings high-security to the 6-stories Audi of Manhattan facility. Visentry, an installer and service provider based in New Jersey, implements an all-IP GeoVision surveillance system to include the state-of-the-art 360° fisheye camera (FE110/FE420/FE510), robust IP66-rated bullet camera (BL130/120/220/320), and the i7 Ultra Series NVR System. Juda Slomovich, Chief Operating Officer of Visentry who oversees the installation, is more than impressed by the system and in particular the fisheye cameras. "With such a large space to cover, using traditional cameras, we would have had to use much more cameras," Juda commented, "the 360° cameras provide excellent image and the software is easy to learn. We will be recommending the system to our customers, that's for sure." GeoVision's Central Monitoring software is also utilized at the Visentry monitoring station to facilitate the 24-hour monitoring service of the dealership. Authorized Audi personnel are able to view monitor and playback via iPhone and iPad through GeoVision's embedded iView software, enabling monitoring on-the-go.
