ICONICS GENESIS32

FDA 21 CFR 11 Solutions

INTERPHEX, New York, NY April 17, 2002 — ICONICS, a leader in the development of Web-enabled industrial automation software for Microsoft® Windows® operating systems, recently announced that version 6.1 of GENESIS32™ offers a wide variety of tools for helping companies to comply with the FDA 21CFR11 regulations. GENESIS32 enables proper handling and recording of FDA-regulated electronic information and applies "electronic signatures" such that the FDA considers them to be "equivalent" to that of handwritten signatures and documents.

"Pharmaceutical companies, food processing plants and others hoping to comply with this regulation now have powerful Plug and Play features offered by the ICONICS HMI / SCADA product," comments Russ Agrusa, ICONICS' President and CEO. "The regulations were carefully reviewed and a significant effort has been made in this product release to provide the tools required for projects needing FDA compliance."

Several ICONICS GENESIS32 components are utilized for meeting these FDA regulations. ICONICS' GenEvent Server tracks operator changes, user logins and system events, producing a secure audit trail for an application. A comprehensive security system is deployed not only on each workstation, but also across the network to restrict access, track users, and provide an environment that meets the standards of the FDA.

Web-enabled systems and those deploying the ICONICS WebHMI™ package will also find the ICONICS FDA solutions ready to plug into their system. Operator comments on alarms and events, setpoint entries, unique IDs and other elements are deployed across the Internet as easily as they are on a local area network.

“The features found in the ICONICS components offer a valuable solution for our industrial customers requiring FDA compliance,” states Bob Braier, Director of Product Deployment for ICONICS. “The detailed options available are extensive and simple to implement.”

GENESIS32 has been successfully deployed and approved in FDA-regulated applications around the globe. ICONICS software is ready to assist in complying with FDA 21CFR11.

ICONICS Background Information

Founded in 1986, ICONICS is a leader in the development of industrial automation software for Microsoft® Windows® Operating Systems. The company offers the industry's only suite of fully integrated OPC-Based components and products: GENESIS32™ Enterprise Edition, available for Windows 95/98/NT, Millennium and 2000; and Pocket GENESIS™ available for the Pocket PC and Windows CE. Both were built from the ground up based on ICONICS' OPC-To-The-Core™ framework. ICONICS offers a complete set of “Plug and Play” automation components including Best-in-Class OPC ActiveX Controls, OPC Toolkit, Human Machine Interface (HMI), SQL based Data Logging and Supervisory Control and Data Acquisition (SCADA) products. The company's products are fully WEB enabled. ICONICS is represented in over 50 countries and has in excess of 50,000 product installations worldwide. For more information visit www.iconics.com, or E-mail to info@iconics.com.
