1 AlarmWorX™32 Resolved Anomalies

Summary

- Resolved an issue with the AlarmWorX32 Server where all the alarms using an expression with a tag got a configuration error. It would result in a GenEvent message similar to the following: "Alarm Tag: XV210_29_FOR0, Condition: , Input tag= x=bittest({{\Pcserv_inter\Schneider-Aut.OFS.2\PLC1!XV210_29}},8) , Quality: BAD - Configuration Error". This issue was introduced with the v9.12 release.

2 GenBroker Resolved Anomalies

Summary

- Revised the default Processor Affinity of GenBroker to use all available processors. GenBroker V9.10 and V9.12 defaulted to using a single processor.

3 Global Aliasing Resolved Anomalies

Summary

- Resolved an issue with Global Aliasing that was preventing the user from editing a Global Aliasing setting once the pick action for setting the Alias was picked. It would display the error "UNABLE TO PARSE". This issue was introduced with the V9.12 release.

4 Licensing Resolved Anomalies

Summary

- The CrypKey Software Library was updated to CrypKey version 7.117 as part of this release.
- The DCOM settings for GenRegistrarServer were changed to manual startup where in the previous v9.12 release, GenRegistrarServer was set to start up automatically by default (by the AppSetupUtility).

5 MonitorWorX Resolved Anomalies

Summary

- Resolved an issue with MonitorWorX where incorrect node names could pop up in the MonitorWorX Tray Icon when using Remote Desktop.

6 Security Resolved Anomalies

Summary

- Resolved an issue with Security Login over WebHMI. This issue was introduced with the V9.12 release.
- Resolved an issue with the Security Indicator ActiveX where it did not display properly on WebHMI when the display was Scalable.

7 SNMP Connector Resolved Anomalies

Summary

- Resolved an issue with the SNMP Connector where strange characters could appear in the Tag Browser when browsing SNMP tags.

8 WebHMI™ Resolved Anomalies

Summary

- Resolved an issue with Security Login over WebHMI. This issue was introduced with the V9.12 release.
- Resolved an issue with the Security Indicator ActiveX where it did not display properly on WebHMI when the display was Scalable.

9 Known Issues

Summary

- An issue with registering a temporary license has been observed on the Vista-32 and Server 2008-64 operating systems. In some cases, it was observed the CPU usage on one of the components could go to 100% and the GENESIS32 Licensing become non-responsive. If you experience this condition, rebooting the machine and rerunning the licensing should resolve this condition.
- Please see the Known issues list in the GENESIS32 V9.12 Resolved Issues Document for other known issues.

About ICONICS

ICONICS is a leading provider of award-winning enterprise manufacturing intelligence and automation software solutions.

ICONICS' solutions deliver real-time visibility into all enterprise operations and systems, helping companies to be more profitable, more agile, and more efficient. As a Microsoft Gold Certified Partner, ICONICS designs its solutions from the ground up to take maximum advantage of Microsoft .NET and SharePoint Portal Server technology, offering an unprecedented level of performance and ease of use.

Our award-winning GENESIS32 automation software solutions can improve productivity, reduce integration and operating costs, and optimize your asset utilization, giving your organization a competitive edge. All ICONICS products are based on "open standards," using OPC-to-the-Core technology leveraging proven architecture and lower TCO of mainstream Microsoft platform, and connect to your existing infrastructure. We have more than 200,000 applications running worldwide serving top manufacturing companies.

ICONICS' **BizViz** suite of products provides real-time manufacturing intelligence from the production floor to the boardroom, turning real-time information into your competitive advantage.
