

Description: Guide to importing or exporting the Workbench Silverlight Asset Catalog

OS Requirement: Windows Server 2008 R2 x64.

General Requirement: Microsoft SQL Server 2008 R2, SharePoint 2010 installation, IIS 6.0 or higher, GENESIS64 installed with AnalytiX containing Workbench Silverlight.

Introduction

This document will describe how to correctly export and import the Asset Catalog configuration from inside Workbench for Silverlight.

Export

1. To open Workbench Silverlight go to Start → Programs → ICONICS → Workbench Silverlight.
2. Right click on root of your AnalytiX provider and select Export.

NOTE: You can also right-click on any level of your tree to export just that item and its children items.

Figure 1 – Exporting from the tree

3. In the Export Options dialog, choose your delimiter and decide whether you would like to generate relative paths. Relative paths are useful if you are exporting items from one part of the tree and importing them into another part.
4. The Workbench will create the CSV file, showing you any errors it generated along the way. Copy the log to the clipboard, if desired, then click Close.
5. A link will appear with the location of your CSV file. Click the link and save the file to your desired location. Click the X in the upper right corner when you've downloaded your file.

Import

1. Right-click on the root of your AnalytiX provider and select Import.

NOTE: If you exported from a part of the tree other than the root make sure to right-click on the same level of the tree to import it. Attempting to import items into the wrong tree level may cause errors.

2. Browse for your CSV file. Choose the Import Mode (only create new items, only update existing items, or both) and pick the delimiter you used when creating the export. Click Upload when ready.

3. The progress of the import will be shown, including any errors. When it's done you can copy the log to the clipboard or click Close. Your items have now been imported.
