

Description: Setting up Secure Desktop.

OS Requirement: The operating system required is Win XP/2000/NT/95/98/Me.

General Requirement:

The Windows operating system has several shortcut keys to simplify the handling of your computer under normal office conditions. In harsh environments, you may consider to protect the user and secure their actions and their access to the desktop.

The ICONICS Secure Desktop utility and Security Server allow you to secure the following:

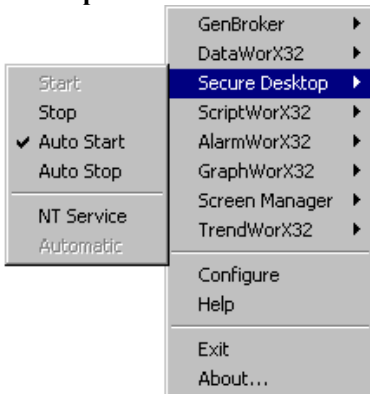

- The Windows Start button
- Ctrl-Alt-Del key combination
- Alt-Tab, Ctrl-Esc and Alt-Esc key combinations
- Custom configurable groups of keys

Auto Start Secure Desktop

The Secure desktop utility can be run as an NT/2000 service, but can also be automatically started/stopped by the **GenTray** utility.

Start the ICONICS GENESIS-32 Tool Tray by selecting *Start, Programs, ICONICS GENESIS-32, Tools, GenTray*

Click the GenTray icon in the bottom right corner of your desktop and select the **Auto Start** function of the **Secure Desktop**.

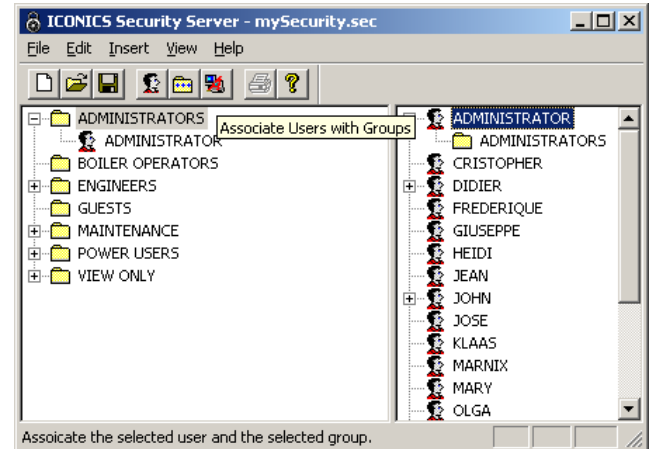

Important: Before you continue, please understand that your desktop will be secured against intruders. **Remember your Administrator password!** With a valid password you can undo your changes in the security server configuration. To protect yourself, make at least a **shortcut** to the **ICONICS Security Server Configurator** on your desktop.

Configure the Security Server

Start the ICONICS Security Configurator by selecting *Start, Programs, ICONICS GENESIS-32, Security Configurator*

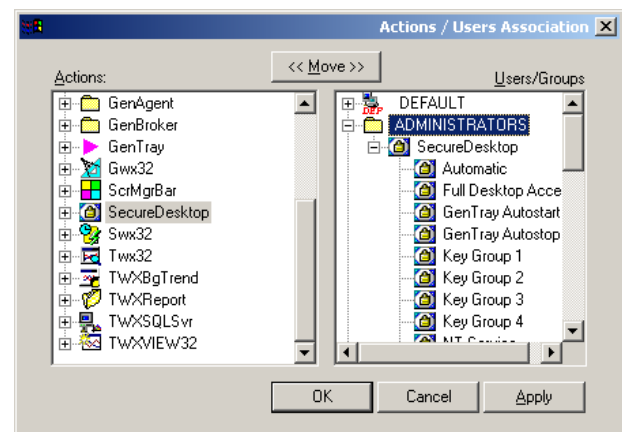

Add a Group of users called **Administrators** and a specific user called **administrator**. Specify a **password** for this user and enable the **Security System Administrator** checkbox. Don't forget to remember your password!

Select **Associate Users with Groups** from the Toolbar.

The next step ensures that at least the users who are a member of the Administrators group have Full Desktop Access. Select **Edit, Application Actions** from the menu

First click **SecureDesktop** in the **Actions** list, then click **Administrators** in the **Users/Groups** list, and finally click the **Move** button.

Now it's time to secure your system. To secure your computer by Default, perform the following. Please read the **Important** section once again.

Select **DEFAULT** from the **Users/Groups** list. Expand the branch and scroll down the list until you see the **Secure Desktop** actions. Select it and hit the **Delete** key on your keyboard. Click the **OK** button.

Secure Desktop

APPLICATIONS NOTE

January 2003

Notice that your **Start** button is *gone*. Only if or when an authorized user logs in to the security server, you will be given access to your desktop. You can login using the standard GENESIS-32 login capabilities or the **Cancel** button in the *Ctrl-Alt-Del* Windows dialog box.
