

Web Publishing Wizard – Quick Start

APPLICATIONS NOTE

January 2003

Description: Information on the features of the ICONICS Web Publishing Wizard

OS Requirement: The operating system required is Win XP/ 2000/ NT/ 98 SE

Other Requirements:

ICONICS Web Publishing Wizard works in association with:

ICONICS GraphWorx32 (On Server or Client PC)
ICONICS WebHMI Server
MS IIS Server on ICONICS WebHMI PC

Web Publishing Wizard Overview:

ICONICS Web Publishing Wizard is used to publish GraphWorx32 displays to an IIS / WebHMI Server PC.

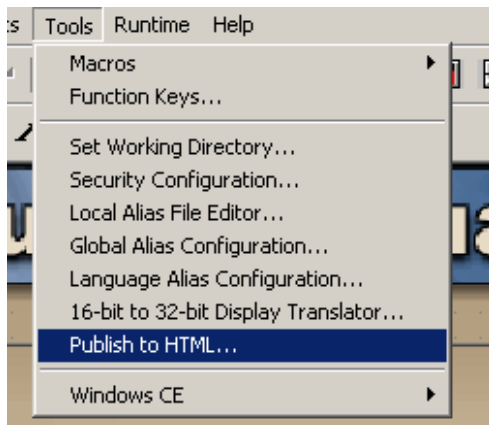

The Web Publishing Wizard can publish GraphworX32 displays to a local or either remote Web Server (e.g. Microsoft IIS) provided the user has proper rights to the remote IIS Server. The Web Publishing Wizard can only publish Graphworx32 displays, which do not contain any “VBA code”. However VB Script or JScript code is supported.

The Web Publishing Wizard create an “.HTM” file and places it in a user defined location on the selected IIS / WebHMI machine with its associated “GraphWorX32.gdf” file.

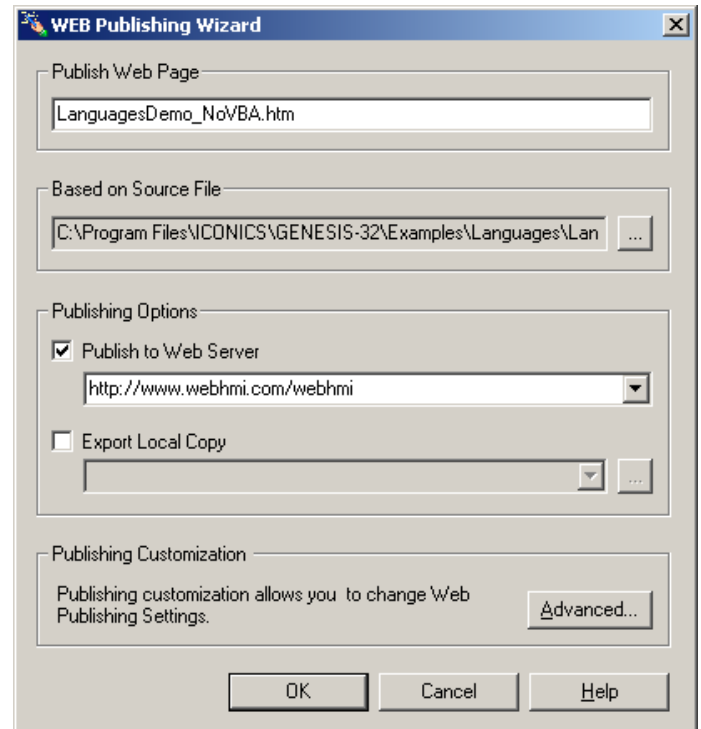

The published “.HTM” file can be viewed on a Client PC in IE 5.5 or higher. The Client PC does not require any ICONICS software preinstalled.

Publishing a GraphWorx32 Display with Publishing Wizard

Open GraphWorx32, create a new display or open an existing one. Save the display without VBA.

Select Publish to HTML in the Tools menu and the following window will pop-up.

The file name for your Web Page will be chosen automatically based on the GraphWorX32 source file. However, you can change the name if desired.

Publishing Options let you choose the location of the Web Server. This can be the local PC or a Server on the local area network (e.g. <http://MyComputer/WebHMI>). You can even choose an Internet URL (e.g. <http://www.webhmi.com/webhmi>.)
