

GENESIS32 7.0 Software License Upgrade Procedure

APPLICATIONS NOTE

January 2003

Description: Upgrading 6.X or 5.X License to 7.0.

OS Requirement: The operating system required is Win XP/2000/NT/98/Me.

General Requirement: A valid software license.

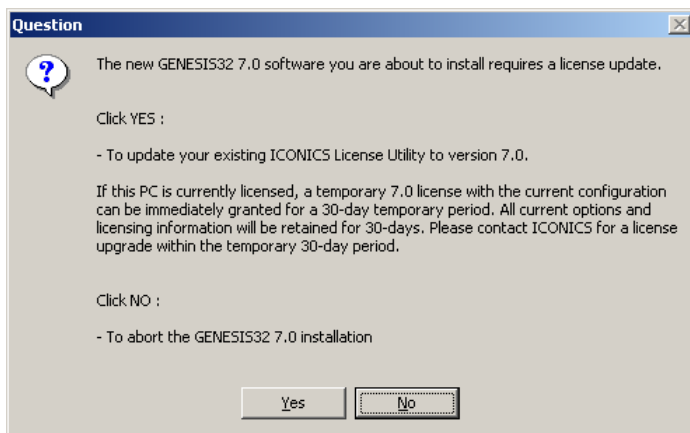

Upgrading to a 7.0 License

GENESIS32 release V7.0 requires a 7.0 license. The 7.0 License Utility allows the current product license to be converted to a 30-day temporary 7.0 GENESIS32 license with the existing profile of your current system. Once the temporary 7.0 license has been activated, you will need to contact ICONICS to purchase a 7.0 Upgrade (**UPGEN32 V6 TO V7**) or (**UPGEN32 V5 TO V7**) if you have not already done so and obtain a new Product Registration Number. This new Product Registration Number will need to be added to your existing Site Key as further described in "Obtain New Site Key via the Web".

Warning: Once a 7.0 30-day temporary license is activated, the user cannot return to earlier versions of the GENESIS32 License Utility. However, the user will be able to run earlier versions of GENESIS32 with the 7.0 License Utility. Once a 7.0 30-day license is activated, the user can only return to earlier versions of GENESIS32 by obtaining a new product license.

GENESIS32 Installation

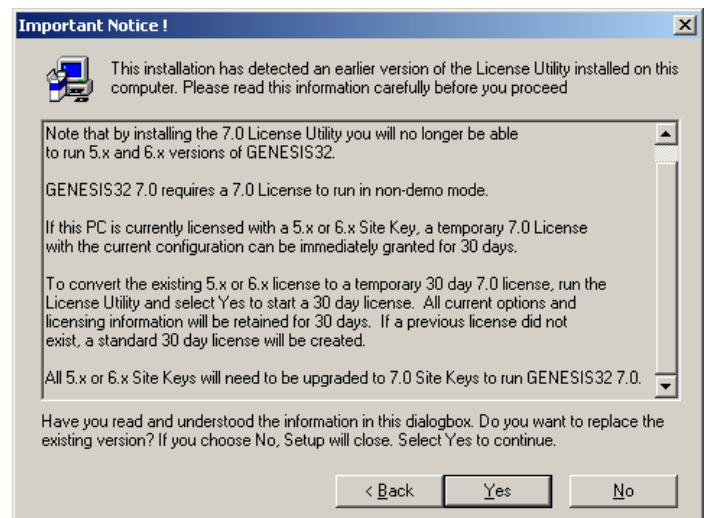

GENESIS32 release V7.0 installation will check for an existing instance of the License Utility. If the existing License Utility is earlier than 7.0, the following dialog will appear.

Selecting Yes will launch the 7.0 License Utility. Once the License Utility has been installed, reselect GENESIS32 to complete the GENESIS32 installation.

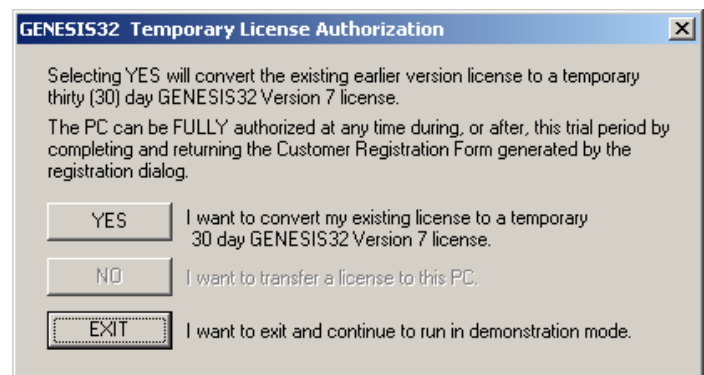

License Utility Installation

The License Utility is automatically launched by selecting Yes in the above dialog. During the License Utility installation, the following dialog appears to confirm that the user is about to move forward to GENESIS32 7.0 and does not plan to return to the earlier version.

Temporary License Conversion

Once the GENESIS32 7.0 and License Utility 7.0 have been installed, run the License Utility. The License Utility will recognize that the current license needs to be upgraded to the 7.0 format. As a result, the following dialog will appear.

Select Yes to convert the existing license to a 7.0 30-day temporary license.

Obtain New Site Key via Web

Within the License Utility, select the "Actions/Register for a License" menu item and then select "Express Web Site Registration via internet" to use the ICONICS Web Licensing server. Log in and select "Add products to an existing license". Alt-Tab to obtain current Site Code. Using your Product Registration Number, enter existing Site Key and new 7.0 Site Code and add either the **UPGEN32 V6 TO V7** (for Version 6.X upgrades) or **UPGEN32 V5 TO V7** (for Version 5.X upgrades) to the existing products to generate your new 7.0 Site Key.
