

GENESIS32 - Multi Language Resource Files

APPLICATIONS NOTE

August 2004

Description: Installing language resource files for using Multilanguage support.

OS Requirement: The operating system required is Win 2003/XP/2000/NT/95/98/Me.

General Requirement:

GENESIS Resource files contain the GENESIS text strings, which can be seen in menus, dialogs and the status bar of the various GENESIS32 applications. These text strings are by default in the English language.

ICONICS has translated the resource files to several languages and are available on the GENESIS32 Multi Language CD or through your ICONICS Sales Manager.

You will need to install these translated resource DLL's in the proper directory in order to use a localized GENESIS.

Step 1:

For a localized **License Utility**, copy the file GenLic32_NLD.DLL (for Dutch) or GenLic32_DEU.DLL (for German) to the \Program Files\ICONICS\Softlic directory

Step 2:

For a localized **GENESIS**, copy the other files *_NLD.DLL (for Dutch) or *_DEU.DLL (for German) to the directory \Program Files\ICONICS\GENESIS-32\Bin

Step 3:

- Start **GraphWorX32** and select from the menu **View, Select Language...**
- Select **Dutch-Netherlands** or **German-Germany** and click **OK**.

Your GENESIS applications as well as the License Utility will now show localized messages and dialogs.
