

Description: This AppNote will explain how to migrate from TrendWorX32 Viewer V 7.1 to TrendWorX32 Viewer V 8.0

OS Requirement: Win 2000/XP/2003/NT

General Requirement: Genesis32 V8.0 installed on the machine

Steps:

- Open a display, which is saved in V7.1. The display in V8.0 and the TWX Viewer will look like the figure below:

Figure 1

- The above figure shows the old plot style. If you want to view the new plot style, go to Properties of the **TWX Viewer – Settings** – and **Uncheck Old plot Style**.

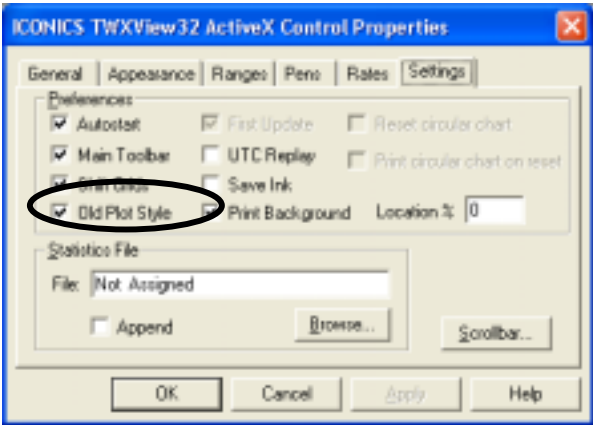

Figure 2

- The Trend Viewer with the new plot style will look like the figure below:

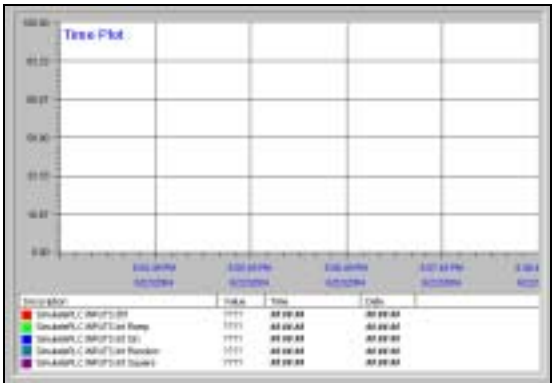

Figure 3

- To load a TWX Viewer Configuration file (*.v32), then go to the **Properties of the TWX Viewer – General** tab – **Select Local File** and click on **Import**. The File browser will open up.

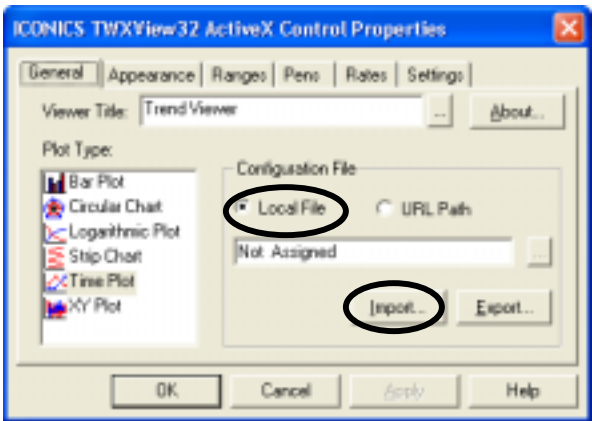

Figure 4

- Similarly to save the configuration file, click on **Export** in the above figure.

Pocket Genesis and Trend Viewer

- The current version of Pocket Genesis is V 7.0. The Desktop Genesis version is 8.0. So if you want to view your Trend Viewer files on the Pocket PC, you have to save your files in the Old Plot Style. You cannot view/save them with the new plot style.
- There is a patch file for the Trend Viewer to view the files on the Pocket Genesis. This patch file can be found under the Tools folder of the Genesis V 8.0 installation CD.
