

Description: Mail Agent Setup for Microsoft Outlook
OS Requirement: Win2000, WinXP, Windows Server2003
General Requirement: ICONICS Multimedia installed on the computer.

MMX Email Operation

Enable Context Registry

Open Windows Explorer and Browse to the installation bin directory. In a standard installation this is

C:\Program Files\ICONICS\GENESIS-32\BIN.

Select **RegistrationContextMenu.reg** and double click. This will open the dialog in figure 1 and ask if the registry should be updated. Click **Yes**.

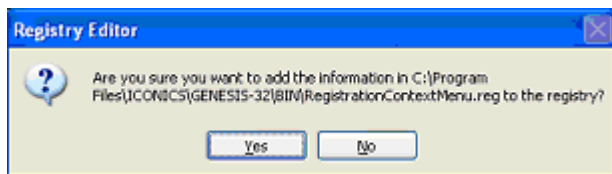

Fig. 1

A second dialog, notifying a successful registry update as seen in Fig 2. Click **Ok**.

Fig. 2

This has added new context menu options to the right operation in Explorer.

Register MMX Agent

Open Explorer and Browse to the installation bin directory. This should be the same location from the first step. Select **MMXMailExt.exe** from the list and right click. This will bring up the context menu. Select **Register Component** from the menu options and left click. This will Register the new email agent. No notification will be given.

To switch back to the original email agent select **MMXMail.exe** and right click. Select Register Component from the menu and left click. No notification will be given.

Additional Information

MMXMailExt.exe is supported with Microsoft Outlook running Microsoft Exchange Server.

1. A default mail account is required for operation. The default mail account must be set up to auto logon. This is usually accomplished by using the user name and password of the account used to logon to the windows box.
2. Microsoft Outlook 2003: The Microsoft Outlook mail client must be open. This is due to a spooler issue in Microsoft Outlook 2003 and may not be necessary for future versions of Outlook.
3. Microsoft Outlook 2000: The sent mail items will only be displayed in the Out folder. They are not transferred to the Sent folder.
