

Description: Guide to upgrade to GENESIS32 version 9.x
OS Requirement: Win 2000 Pro/Server, XP Pro, Server 2003
General Requirement: Knowledge of ICONICS GENESIS32

Introduction

From time to time, systems need to be upgraded for better performance and/or obtain features in a later version. Although the upgrading process is simple and intuitive, there may still be questions like what do I do when I see a remove file message or what happens to my license after I upgrade. This document will answer most of those questions and guide you through the upgrade process.

Upgrading

- Go to Start → Settings → Control Panel → Add Remove Programs and uninstall the older version of Genesis32.

NOTE: If you do not uninstall version 8.x first, you will receive a message saying that a different version of Genesis is installed and you need to remove it before the new installation.

NOTE: Before Un-installing GENESIS32 V8.x, if you have any files you would like to keep located under GENESIS32 folder; back them up to a different location
- After you have clicked on the “Change/Remove” button, a message will popup asking you to confirm that you want to completely remove GENESIS32. Click Yes.

Figure 1 - Remove GENESIS Confirmation Dialog

- The uninstall process will begin. Before it completes, you will see messages popping up asking you to remove shared files click “YES To All” to remove all of them.

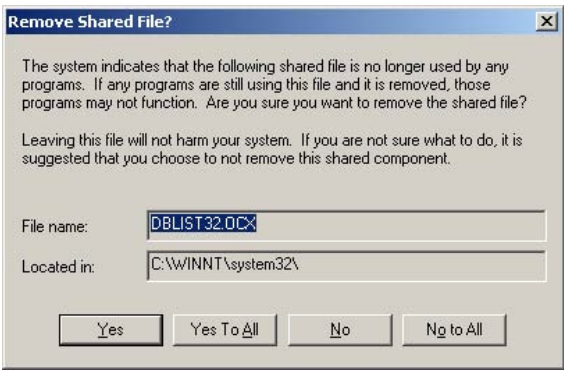

Figure 2 - Removing Shared Files

- Click “OK” when the un-installation is completed. You will see a message that confirms the removal of GENESIS32 instructing you to restart your machine. Click “OK” to restart.

Figure 3 - Restart Machine After Uninstall Completes

- Insert the GENESIS32 V9 CD into the CD-ROM drive. The Install Shield will auto start. Click on GENESIS32 and follow the on screen instructions to install Genesis32 V9.
- When it finishes installing, it will ask if you would like to install the Licensing and read the ReadMe file. You can read the ReadMe later, but check the Licensing and click “OK” to install GENESIS32 Licensing on the machine.
- After you install the V9 license, reboot the machine again.
- Look in the License Utility by going to Start → Programs → ICONICS Software Licensing → License Utility.
- Once the Utility opens, go to Actions → View License.
- You will notice that your license is changed to a 30 day temporary license. Your license site key should still be in the site key field.
- You should now either license your machine by Generating a new license or contact ICONICS for a version 9 license.
