

**Description:** Guide to migrating from TrendWorX32 Viewer version 7.x to TrendWorX32 Viewer version 8.0 or higher

**OS Requirement:** Win 2000, XP Pro, Server 2003, Vista, Server 2008, Windows 7

**General Requirement:** Genesis32 version 8.0 or higher installed on the machine

## INTRODUCTION

We have improved the TrendWorX32 Viewer ActiveX in versions of GENESIS that is later 7.x. The look and feel of the viewer is different. However, when you migrate from version 7, the viewer will be preserved to look like the older style. This document describes what you need to do to make the viewer display the new style.

## The New Viewer

1. Open a display, which is saved in version 7.x in your current version of GENESIS and the TrendWorX32 Viewer will look like the figure below

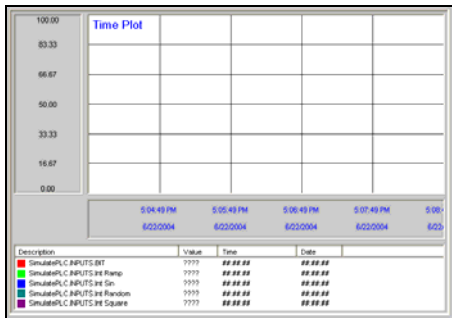

Figure 1 - Old Style Trend Viewer

2. The above figure shows the old plot style. If you want to view the new plot style, double click to bring up the properties of the ActiveX and select the Settings tab. Un-checking **Old Plot Style** should result in a plot similar to the one you see in Figure 3.

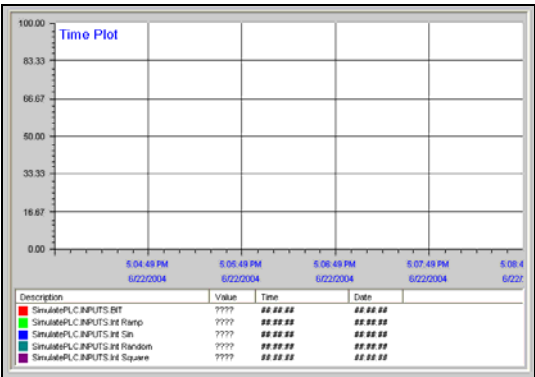

Figure 3 - New Style Plot

3. To load a TWX Viewer Configuration file (\*.v32), go to the Properties of the TrendWorX32 Viewer, select the General tab if its not already selected, then select **Local File** and click on **Load**. The File browser will open up.
