

Text or graphic terminal

Choose from a wide range of operator panels according to the specific nature of your task:

- ▶ The text panels in the TERMEX 220 and TERMEX 320 product series feature a monochrome 4x20-character display and are used to navigate, visualize measured values and show messages in relatively uncomplicated systems. These intrinsically safe text panels are installed directly in the hazardous area (Zones 1 and 2 (II 2 G)) and are also suitable for dusty atmosphere (II 3 D). They are connected to the PLC via a power supply unit in the safe area. Data can be exchanged with the PLC by means of various communication or fieldbus protocols, and the panels can also be connected to a computer if a classic ASCII protocol is used.
- ▶ The graphic panels in the TERMEX 230, TERMEX 330 (monochrome) and TERMEX 770 (VGA, 256 colors) product series are designed for systems with challenging display and control requirements. These graphic panels allows screens to be visualized extremely ergonomically by using different font sizes and embedded graphics.

Several of the products in this proven series are also available in a non-explosion-protected variant.

Case types

A wide range of cases for the most diverse applications can be supplied for the TERMEX family.

The diagram opposite shows the wall-mounting case (stainless steel) and a case for panel mounting.
