The modules require a minimum load of 10...20 % at the main output in order to generate sufficient voltage for the additional outputs.

Assistance in table use:

- 1 Select the column for input voltage range.
- 2 Select the row for the appropriate main output voltage.
- 3 The intersection of both results in the module required.
- 4 Additional outputs can be chosen, considering that the max. output power of 270 / 400 / 450 W will not be exceeded.

For example:

- 1 input voltage = 12 VDC
- 2 output voltage = 60 VDC @ 3 A
- 3 results in a M 606 module.
- 4 Additional outputs to be specified.

¹⁾ input supply from PFC also suitable
